Where does it sit?

Year 6 Statistics and Probability · Lesson 1 · AC9M6P01 · Version S

NAME _____ CLASS _____

Part A · Put the events on the line

Write the letter of each event in the right place on the number line below.

The same line, written as percentages. Nothing moves — only the labels change.

Part B · Write each probability three ways

	EVENT	FRACTION	DECIMAL	PERCENTAGE
A SF	A tossed coin lands heads.			
B SF	An ordinary six-sided die shows a 7.			
C SF	A four-section spinner, one section shaded, lands on shaded.			
D SF	A bag holds 10 counters: 5 red, 5 blue. You draw a red one.			
E SF	A bag holds 4 counters: 3 red, 1 blue. You draw a red one.			
F CU	The next car that drives past the school gate is white.			

Event F cannot be worked out exactly. Estimate it, then explain your estimate on page 2.

WORKING SPACE

Part C · Show your thinking

Use the boxes. Working is part of the answer.

SF

1. Look at event A and event D.

They ended up in the same place on the line. Explain why.

SF

2. Look at event B.

Why is this one at 0? What does 0 mean?

CU

3. Event F — the next car past the gate is white.

You could not work this one out. Estimate it, then explain your estimate.

Exit ticket

Hand this in at the end of the lesson.

An event has a probability of 0.2

1. Write 0.2 as a fraction and as a percentage.

FRACTION	PERCENTAGE

2. Draw a spinner, a bag of counters or a die that would give this probability.

Label it so someone else can see why it works.

3. Mark 0.2 on the number line with an arrow.

HOW DID TODAY GO?

Tick one.

☐ I could do all of it ☐ I could do most of it ☐ I need more practice
