Class pooling chart

Lesson 4 · bag of 4: 2 red, 1 blue, 1 green · keep for Lesson 5

One per class

Each pair writes in their own numbers. Total the columns at the bottom, then work out the last row together.

PAIR	TRIALS	REDS OBSERVED	REDS EXPECTED	DIFFERENCE (obs – exp)
WHOLE CLASS

The question that matters

Careful: compare the FRACTIONS, not the differences. The difference usually gets BIGGER when you pool. The fraction gets closer.

1. The whole class got _____ reds out of _____ trials.

2. Written as a fraction, that is _____

3. One pair got _____ reds out of _____ trials.

4. Written as a fraction, that is _____

5. Which fraction is closer to one half? _____

AND THE ONE WE CANNOT ANSWER YET

Why does running more trials make the fraction closer?

Write your best idea here. We will find out in Lesson 5.
