Name		Team	

Team Comet’s sheet

Treasure Bag has three outcomes: Gold, Silver and Blue. Sixteen buddies played. This is typed in exactly as the paper said.

Row	Buddy	Outcome	Won / 3	Seconds	Liked it
1	Ava	Gold	1	38	4
2	Noah	Blue	0	42	3
3	Mia	Silver	2	35	4
4	Liam	gold	1	40	3
5	Zoe	Blue	5	44	2
6	Ethan	Silver	0	4500	3
7	Isla	Gold	2	39	0
8	Jack	Blue	1	forty	4
9	Harper	Silver	1	41	3
10	Oliver	Gold	3	33	4
11	Chloe	Blue	0		
12	Lucas	Silver	2	37	3
13	Ruby	Gold	1	36	4
14	Lucas	Silver	2	37	3
15	Grace	Bleu	0	43	2
16	Max	Gold	2	34	3

Six numbers from the spreadsheet should worry you: 16 rows, but 4 different outcome names; a biggest "won out of 3" of 5; a biggest "seconds" of 4500; a smallest "liked it" of 0; and only 14 of the 16 cells in Seconds counted as numbers.

Part A · The faults, one row each

Seven things are wrong with this sheet. The questions are on the board. Fill one row in for each fault. The third column is the one that matters: can you prove what the right value is, or can you only flag it?

Row(s)	What looked wrong	Prove the fix?	What we did	Why we could defend that

"Prove" means the right value can be worked out from something other than your own guess — the paper sheet, or the rules of the game. "Probably" is not proof.

Part B · The rule behind it

CU 7

Sort the seven faults into the two groups, then write the rule that separates them.

We can prove the fix	We can only flag it

THE RULE THAT SEPARATES THEM

CU 8

After cleaning there are 15 rows but only 13 times. A team member wants to delete the two rows with missing times so every row is complete. What would that do to their results?

Our decision log

One line for every change you made to your own team’s data. This is the answer to "how was your data collected, and what was wrong with it" in Part B.

Row	What looked wrong	What kind of fault	What we did	Why we could defend that

Fix what you can prove. Blank what you cannot. Never invent a number. Write down every decision.

Exit ticket

On your own. Five minutes.

SF 1

A sheet has 20 rows but the spreadsheet counts only 18 numbers in the height column. Give one reason that could happen.

CF 2

A team finds one buddy’s rating written as 7 on a scale of 1 to 4. Write what they should do, and the reason, in one sentence each.

CU 3

Two teams have the same data. One team’s file has no blanks. The other team’s has four. Which team would you trust more, and what would you need to see to be sure?
