Name		Team	

Two teams, two games

Team Comet ran Treasure Bag. Team Nebula ran Lucky Dip. They did not have the same number of buddies, and that matters.

Rating	Comet	Nebula	Won out of 3	Comet	Nebula
1 did not enjoy	0	1	0	4	6
2 it was okay	2	4	1	5	3
3 I liked it	6	3	2	4	1
4 I loved it	5	2	3	1	0
Buddies with a rating	13	10	Buddies with wins	14	10

Part A · Reading the two tables

SF 1

What is the mode of Nebula’s ratings? What is the mode of Comet’s?

CF 3

Someone says "Comet got five 4s and Nebula only got two, so Comet’s game was more than twice as good". What is wrong with that reasoning?

Part B · Counts into fractions

CF 4 Work out the fraction of each team's buddies who gave a 3 or a 4. Calculator allowed.

	How many gave 3 or 4	Out of how many	As a fraction	As a percentage
Comet				
Nebula				

CF 5 Write one sentence comparing the two sets of ratings. Name the feature that differs — do not describe each team in turn.

The structure: name the feature → give both values → say what it means.

CF 6 Two separate column graphs, or one graph with both teams side by side? Which lets somebody see the difference at a glance, and why?

Part C · What a difference proves

CU 7

Six of Nebula’s ten buddies won nothing at all. Four of Comet’s fourteen won nothing. Does that mean Nebula’s game is unfair? What else would you need to know before you could say?

CU 8

The two teams had different numbers of buddies. Name one comparison you can still make safely using raw counts, and one you cannot.

Safe with raw counts	Not safe with raw counts

Exit ticket

On your own. Five minutes. Team Orion: 9 of 12 buddies won at least one turn. Team Vega: 7 of 10.

SF 1 Write each one as a percentage.

CF 2 Write one sentence comparing Orion and Vega. Name the feature, give both values, say what it means.

CU 3 A third team says "20 of our buddies won at least one turn, which is more than both of you, so our game is the easiest to win". What would you ask them before you agreed?
