Name		Team	

The visit times

Comet: 33, 34, 35, 36, 37, 38, 39, 40, 40, 41, 42, 43, 44.

Nebula: 26, 27, 28, 29, 30, 31, 32, 33, 35, 38.

Comet has thirteen times and twelve of them are different from each other. A column graph of those raw numbers would have twelve bars, nearly all of them one high.

Part A · Putting them in groups

SF A

Tally these ten times into the groups below: 33, 38, 41, 36, 40, 44, 35, 39, 42, 37.

Group (seconds)	Tally	How many
26 to 29		
30 to 33		
34 to 37		
38 to 41		
42 to 45		

SF B

Add up your counts. Do they come to 10? If not, one time has been put in two groups or missed out.

CF C

Which group has the most times in it? Finish the sentence.

"MOST VISITS TOOK BETWEEN _____ AND _____ SECONDS."

More frames: "Hardly any visits took _____." · "The shortest group with anything in it was _____."

Our own times

How many usable times		Shortest / longest	

Fewer than about eight? Use the ruler drop data on the spreadsheet instead, and write that in your decision log.

Our groups

Group (seconds)	Tally	How many
26 to 29		
30 to 33		
34 to 37		
38 to 41		
42 to 45		
Total		

A sketch of our display

Bars touching, because the groups run into each other. Title it and label both axes.

Describing it

THE SHAPE OF OUR GROUPED TIMES

WHAT THE GROUPING HAS HIDDEN

Exit ticket

On your own. Five minutes.

SF 1

Twelve measurements: 21, 24, 22, 29, 31, 26, 33, 25, 28, 30, 23, 27. Put them into the groups below. Check your counts add to 12.

Group	21 to 25	26 to 30	31 to 35	Total
How many				

CF 2

A team uses the groups 20–25, 25–30 and 30–35. Name the problem and write a set of groups that fixes it.

CU 3

Someone says "grouping the data is cheating, because you are hiding the real numbers". Write a reply.
