GAMES DAY A HUGE SUCCESS

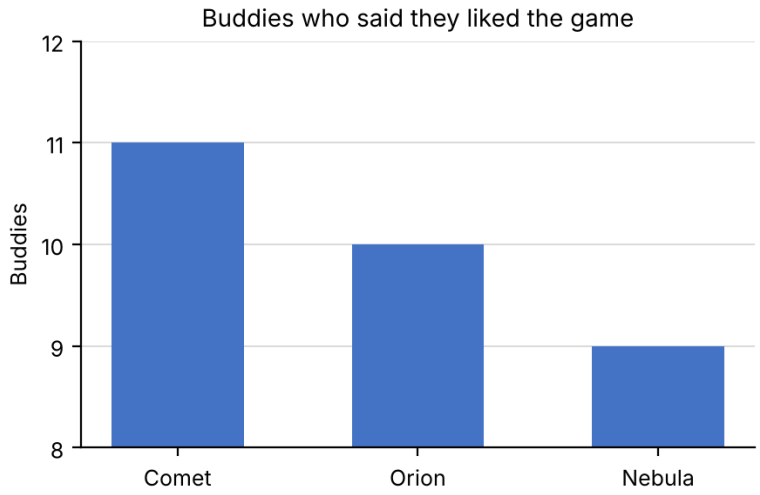
Preps love Year 6's maths games

by a parent helper

Last Friday our Year 6 students ran their Buddy Games Day. Thirty-eight Prep buddies came through the hall and played the chance games the Year 6 students had designed, built and tested themselves over the last few weeks.

We asked four Prep students what they thought of the day. Three of them told us it was the best day of the whole year. That means 75% of Prep students rated Games Day the best day of the year.

Some games were far more popular than others. The graph below shows how many buddies said they liked each game. Team Comet's game was three times more popular than Team Nebula's.



At one stall, every single buddy who played won a prize. Games Day was a win for everyone.

Twice as many Preps asked to play again next year as asked last year.

The results show that playing chance games is the best way for children to learn mathematics.
